Job Assist

Jeroen Vincent

XPARG Vision - Philosophy

Provide to the container glass industry:

- solutions for **Continuous Improvement**
- of **Process and Product Quality**
- to **reduce losses** (cost) and **improve efficiency** (profit)
- by developing **innovative solutions** for the **Hot End**
- that's **where quality is made...!!!**
- for **customer's satisfaction**

1999 XPAR Vision

2000 Hot End infrared camera systems GlassTech

2003 IR Gob Weight Control

2006 IR Dual Camera system

XPAR Vision – heading for perfection

- Continuous developments to improve existing solutions
 - New & Improved Software Modules (v6)
- Bring new solutions to the Glass Industry:

Gob Assist

Why the new Gob Assist?

- Can any one see by eye what happens exactly in 20ms?

Why Gob Assist?

- Gob loading is an important process step
- 60%-80% (aspect) defects are related to Gob Loading
- No tools available, only years of experience (eye)
- Incomplete know-how loading process
- Much room to improve

What is Gob Assist?

Design goal's:

- To **find** the optimal loading of the gob
- To **maintain** the optimal loading of the gob
- To **retrieve** the optimal loading after (equipment) change
- To **retrieve** the optimal loading after a Job Change
- To **improve** the gob loading process

Principle of the Gob Assist

Example Camera 1:

Example Camera 2:

The Gob Assist System

xPARvision

heading for perfection

Gob Assist & XPAR IR-D

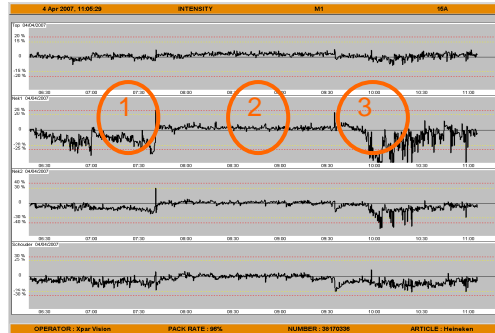

- 1 = deflector adjusted
- 2 = stable / optimal loading
- 3 = adjusted deflector

xPARvision

heading for perfection

Gob Assist & XPAR IR-D

- No direct information about the Gob Loading
- Adjusting time can be long
- No product dependent optimal preset possible (Material change & Job Change)

Gob Assist Measurements:

Parameters:

- Position into the blank mould
- Speed
- Length
- Shape
- Diameter
- Orientation
- Time of Arrival (T.O.A.)

Gob position definition

Gob speed & orientation definition

Gob length 3D

Example test results Gob Assist

Ardagh Glass
Dongen, The Netherlands

10 section, double gob
156 gram jar

Test: Section 7

Example image of the gobs

Left camera

Right camera

Test results Gob Assist

Change the position of the deflector
in a “controlled” way

Deflector adjustment X direction +2 mm steps

Gob Assist X-position

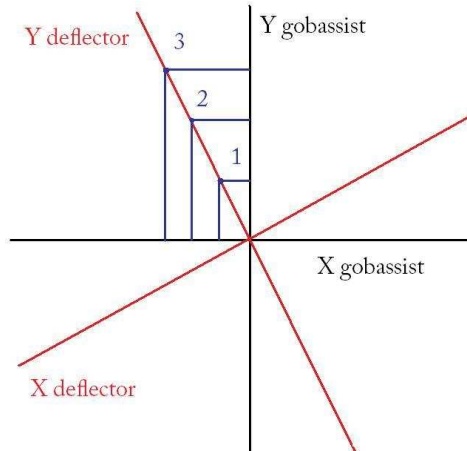

Deflector adjustment X direction +2 mm steps

Gob Assist Y-position

Why changes also the Y- value's ?

Deflector adjustment X direction +2 mm steps

Gob Assist XY-plot

Deflector adjustment X direction -2 mm steps

Gob Assist X- positions

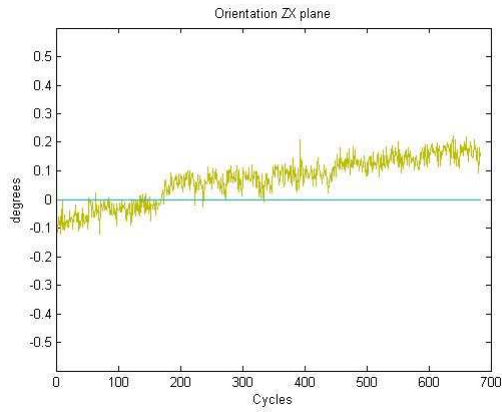

Gob Speed Z-direction

Zmean = 6.56 m/s

Sigma = 0.05 m/s

Gob orientation ZX plane

0.15 degree ~ 2.6 mm/m

Gob orientation

Orientation influences the optimal position of the gob!

Deflector adjustment Y direction 2 mm steps

Gob Assist Y position

Deflector adjustment Y direction steps

Gob Assist X-position

Deflector adjustment Y direction 2 mm steps

Gob Assist XY position

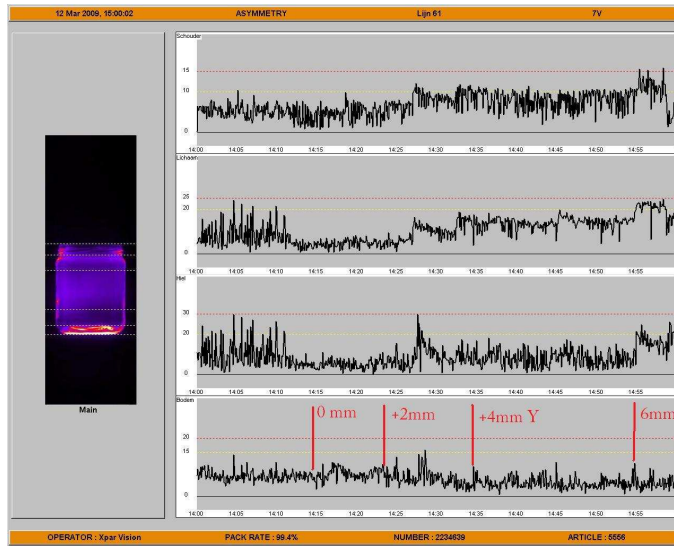

Deflector adjustment

Gob Assist XY position

XPAR IR Data

xparvision

heading for perfection

Gob length

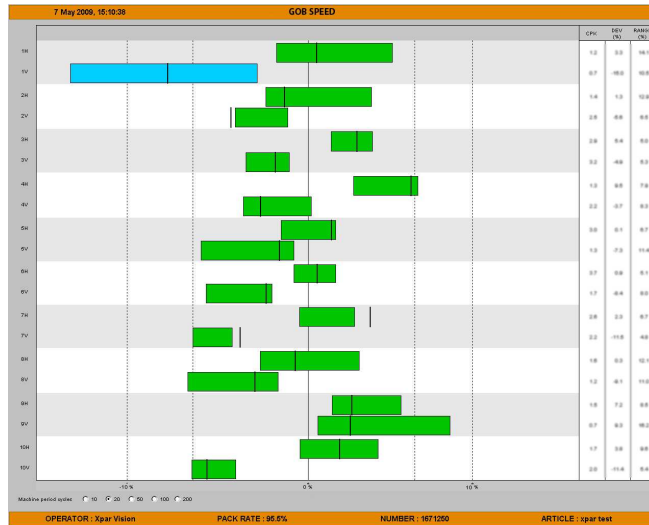

Lmean = 177 mm

Sigma = 1,10 mm

xparvision

Speed Overview Gob Assist

Summery Gob Assist

- Now you have access to factual information on gob loading
- Easy finding, maintaining and retrieving optimal gob loading
 - → improve gob loading process
- Reduce defects due to loading
 - → improve product quality

Gob Assist: an indispensable tool for the container glass industry!

Thanks for listening!
